11. Future & Planned Features

12. Appendix

1. Executive Summary

1.1 Platform Overview

H2O Online is a comprehensive water delivery and hydration management platform designed to connect customers, water suppliers, and delivery partners through a unified digital ecosystem. The platform enables on-demand water ordering, subscription-based recurring deliveries, wallet-based payments, real-time order tracking, supplier fulfillment management, delivery partner logistics, and centralized admin oversight.

The platform consists of three integrated components:

- **Mobile App** — React Native (Expo) application for customers, suppliers, and delivery partners
- **Admin Portal** — React web application for platform administrators and sub-admins
- **Backend API** — Node.js / Express REST API with MongoDB database

Mission: Deliver clean, reliable water to homes and businesses while giving suppliers and delivery partners the tools to manage orders, earnings, and operations efficiently — all under one admin-controlled marketplace.

1.2 Technology Stack

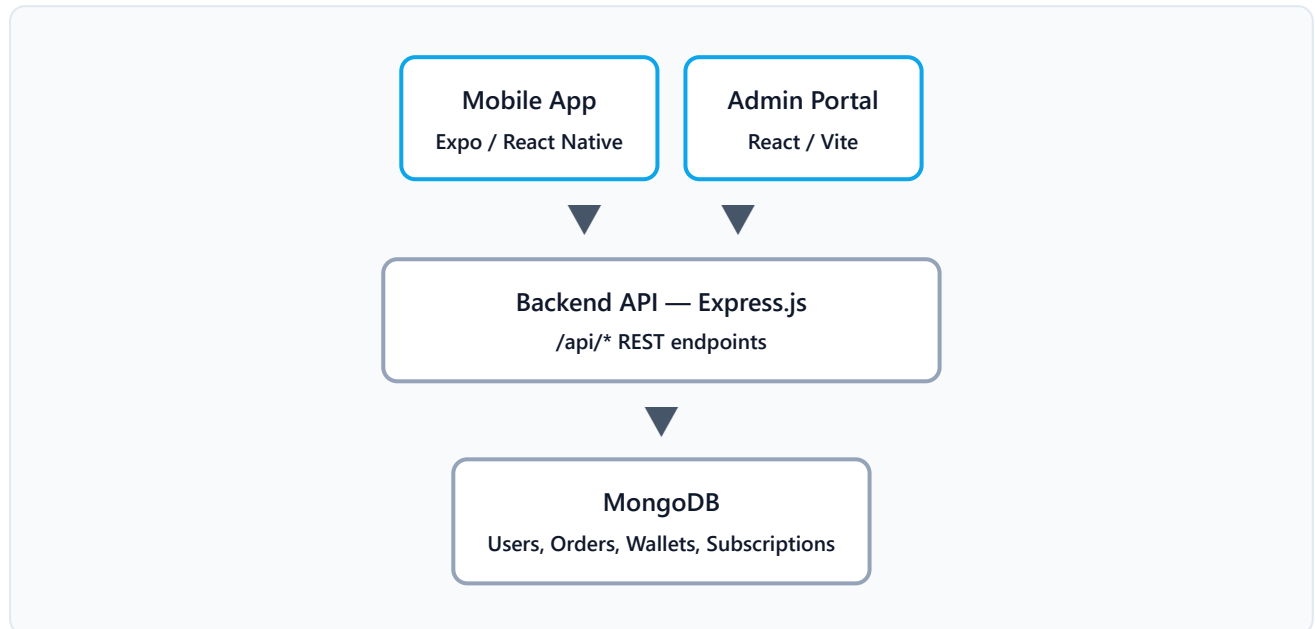

Layer	Technology	Details
Mobile App	React Native + Expo Router	File-based navigation, AsyncStorage auth, context-based state
Admin Portal	React 18 + Vite + React Router	SPA with JWT auth stored in localStorage
Backend	Node.js + Express 5	RESTful API, JWT authentication, Mongoose ODM
Database	MongoDB	Document store for users, orders, subscriptions, wallets
Payments	Internal Wallet System	Wallet debit/credit; platform wallet for settlement

1.3 User Roles

Role	Platform	Status	Description
Customer	Mobile	Live	Browse products, place orders, manage subscriptions, track deliveries, wallet payments
Supplier	Mobile	Live	Water vendor — accept orders, manage catalog, assign riders, view earnings
Delivery Partner	Mobile	Live	Pickup and deliver orders; manage subscription routes; redeem earnings
Admin / Master	Admin Portal	Live	Full platform management, financials, user/supplier verification
Sub-Admin	Admin Portal	Live	Limited admin — no financials, no user deletion, no admin creation
Corporate	Mobile	UI Demo	Bulk office supply — screens exist; login blocked as "Coming Soon"
Restaurant	Mobile	Coming Soon	Hospitality water solutions
Event Org	Mobile	Coming Soon	Large-volume event water planning
Institute	Mobile	Coming Soon	Campus water monitoring and supply

2. System Architecture

2.1 Component Overview

2.2 Data Flow

1. Mobile and admin clients authenticate via JWT tokens
2. API requests are routed through Express middleware (auth, adminAuth)
3. Business logic in route handlers and services (e.g., order payout)
4. Mongoose models persist data to MongoDB
5. Wallet transactions update balances atomically on order placement and delivery

3. Customer Journey (Mobile App)

3.1 Onboarding & Authentication

Entry Flow

- App launches with a 2-second loading screen, then displays the **Role Selection** screen
- Customer selects "Customer" role and taps **Sign Up** → navigates to Create Profile
- Existing users tap **Login** → Login screen with role tab pre-selected as Customer

Registration (Create Profile)

Field	Required	Notes
Full Name	Yes	Display name on profile
Email	Yes	Used for login; must be unique
Phone	Yes	Contact number
Password	Yes	Hashed with bcrypt on server
Age, Gender, Activity Level	No	Profile enrichment
Family Size	No	Used for plan recommendations
Avatar	No	Profile photo
Subscription Plan	No	Optional plan selection during signup

On successful registration via `POST /api/auth/register`, user is assigned role `customer` with auto-generated code prefix `cust_` and redirected to Dashboard.

Login

- Email + password authentication with terms acceptance checkbox
- Role tab must match stored user role or login is rejected
- JWT token stored in AsyncStorage (`h2o_auth_token`)
- Token restored on app relaunch via AuthContext

Placeholder features: Forgot Password, Google Sign-In, Apple Sign-In, and OTP Login screens exist but are not fully integrated with the backend.

3.2 Dashboard & Home

The customer dashboard is the central hub providing:

- **Hydration summary** — today's water intake vs. daily goal with weekly graph
- **Active subscriptions** — count and quick access to plan management
- **Quick actions** — Order Water, My Plan, Track Order, Order History, Water Intake, Saved Addresses, Billing
- **Wallet balance** — tap to open wallet modal for top-up and transaction history
- **Connected devices** — UI placeholders for Apple Watch, Smart Bottle, TV Hub integration

3.3 Ordering Workflow

Step 1 — Browse Products (Order Screen)

- Product catalog fetched from `GET /api/products`
- Filters: price range, delivery time, rating, distance, bottle size
- Product comparison and ratings modal
- Actions: Add to Cart or Buy Now (direct to checkout)

Step 2 — Cart

- View items with quantity controls
- Update quantities; remove items
- Proceed to Checkout

Step 3 — Checkout

- Select or add delivery address (saved addresses integration)
- Receiver name and contact
- Delivery schedule: Instant or Scheduled (date/time picker)
- Coupon code field (UI ready)
- Wallet balance shortcut

Step 4 — Payment

Method	Status	Behavior
Wallet	Live	Balance checked; debited on order placement
Cash on Delivery	Live	Order placed without wallet debit
Card	UI Only	Payment method field stored; no gateway integration
UPI	UI Only	Payment method field stored; no gateway integration

Step 5 — Order Confirmation

Order created via `POST /api/orders`. Confirmation screen shows order ID with options to Track Order or return to Dashboard.

3.4 Order Tracking

Real-time order status pipeline displayed on Track Order screen:

1. Waiting — Order placed, awaiting supplier acceptance

2. Accepted — Supplier accepted with ETA

3. Partner Assigned — Delivery partner assigned by supplier

4. Picked Up — Delivery partner collected order

5. Delivered — Order completed

Customer can view supplier ETA, call supplier/delivery partner, and access order details modal.

3.5 Subscriptions & Billing

Plan Subscription

- Available plans: Basic, Family, Active, Premium (slugs: basic, family, active, premium)
- Select plan → choose products within plan limits → set frequency (daily/weekly/monthly)
- Configure delivery time window and delivery address
- Create via `POST /api/subscriptions`

Billing

- Monthly subscription bills auto-generated (due 5th of each month)
- View pending, paid, and overdue bills on Billing screen
- Pay bills using wallet balance via `POST /api/bills/:id/pay`

3.6 Wallet & Payments

- **View balance** — Dashboard tile, Profile screen, Checkout shortcut
- **Top up** — Credit wallet via `POST /api/wallet/credit`
- **Pay orders** — Wallet debited on order placement
- **Pay bills** — Subscription bill payment from wallet
- **Transaction history** — Full log of credits and debits

3.7 Water Intake & Wellness

- Log daily water consumption in liters or glasses
- View weekly intake graph and percentage of daily goal
- Dashboard hydration summary synced via `GET /api/water-intake/summary`
- Add/remove intake entries for any day

3.8 Profile & Addresses

Feature	Screen	API
View/edit profile	Profile	<code>GET/PUT /api/users/me</code>
Change password	Profile	UI present
Wallet display	Profile	<code>GET /api/wallet</code>
Saved addresses	Saved Addresses	<code>GET/POST/PUT/DELETE /api/addresses</code>
Order history	Order History	<code>GET /api/orders</code>
Product reviews	Order History	<code>POST /api/reviews</code>
Logout	Profile	Clears token; returns to tabs/role selection

4. Supplier Journey (Mobile App)

4.1 Onboarding & Verification

Registration Fields

Category	Fields
Business Info	Business name, type (water supplier / delivery agent / other), address, city, pin code
Credentials	Email, phone, password
Documents	Business license, GST certificate, identity proof, bank details (for water suppliers)
Delivery Agent	Vehicle type, vehicle number, delivery documents

Registration via `POST /api/auth/register-supplier` creates User (role: supplier) + Supplier profile with `onboardingStatus: pending` and a 6-digit verification code.

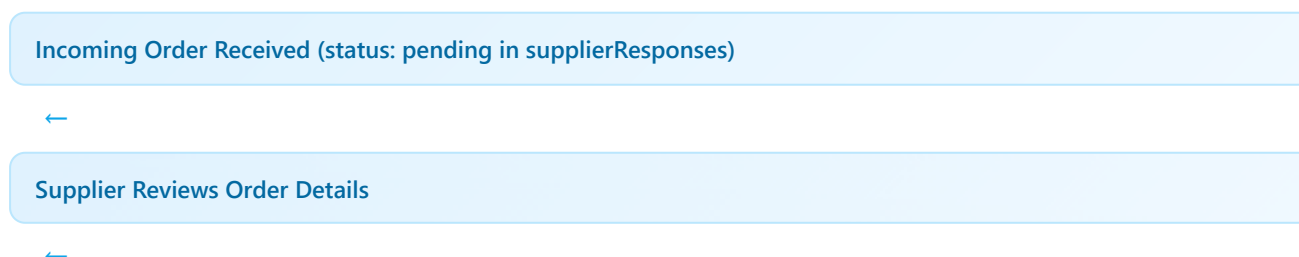

Verification Gate

- After registration, supplier sees verification code screen then pending screen
- App polls `GET /api/suppliers/me` every few seconds
- When admin approves (`onboardingStatus: approved`), auto-redirect to Supplier Dashboard
- On login, unapproved suppliers are routed to Verification Pending screen

4.2 Supplier Dashboard

- Today's delivered order count and earnings summary
- Quick navigation to all supplier modules
- Inline "Add Product" modal for rapid catalog expansion
- Incoming orders badge/indicator

4.3 Order Fulfillment

Accept (with ETA, remarks, fleet type) OR Reject

Assign Delivery Partner from available riders

Partner Picks Up → Delivers → Order Complete

Incoming Orders Screen

- View pending orders with item details, customer info, delivery address
- Accept with: estimated delivery time, remarks, fleet type filter
- Select delivery partner from `GET /api/delivery-partners` list
- Reject order — if all suppliers reject, order is auto-cancelled
- Change assigned rider on accepted orders

4.4 Product Catalog

- View all supplier products with price, stock, capacity, category, badge
- Create new products: name, description, price, stock, capacity, image, category
- Edit and delete existing products
- API: `GET/POST/PUT/DELETE /api/supplier/products` and `/api/products`

4.5 Financials & Wallet

Module	Details
Financials Screen	Total revenue, platform deduction (commission %), net earnings, order breakdown
Wallet Screen	Current balance, credit/debit transaction history
Order History	Complete history of accepted, delivered, and cancelled orders
Payout	On delivery completion: supplier receives (100 – commission%) of their item value

4.6 Support

- In-app chat with admin via Supplier Support screen
- Messages polled every 5 seconds
- API: `GET /api/supplier-support/thread` , `POST /api/supplier-support/message`

5. Delivery Partner Journey (Mobile App)

5.1 Onboarding & Verification

Login → Sign Up → Delivery Onboarding → Verification Pending → Delivery Dashboard

Registration

- Accessible from Login screen → Delivery Partner tab → Sign Up
- Fields: name, email, phone, password, vehicle type, vehicle number, optional documents
- API: `POST /api/auth/register-delivery`
- Alternative path: Supplier Onboarding with business type "delivery agent"

Verification

- Admin verifies identity, license, and vehicle documents
- App polls until `onboardingStatus: approved`
- Approved partners appear in supplier rider assignment and admin subscription delivery assignment

5.2 Delivery Dashboard

- Today's delivery summary: total, delivered, in progress, cancelled
- Quick links: Incoming Orders, Subscription Orders, Order History, Financials, Help, Profile
- Earnings overview

5.3 Delivery Workflow (Instant Orders)

Order Assigned by Supplier

View in Incoming Orders (Instant / Scheduled tabs)

Mark Picked Up

Navigate to Customer Address

Mark Delivered → Earnings Credited

5.4 Subscription Deliveries

- Dedicated Subscription Orders screen for recurring delivery routes
- Filters: today, this week, custom time range
- View subscription details: customer, address, products, delivery window
- Admin assigns partners to subscriptions with pickup hub and slot management

5.5 Financials & Redemption

- View total earnings and per-order breakdown
- Delivery partner receives 10% of order total on wallet-paid deliveries
- Redeem earnings from wallet via debit operation
- Order summary aggregates: total orders, delivered, in progress, cancelled

5.6 Support & Profile

Module	Details
Help / Support	Chat with admin; polled every 5 seconds
Profile	Update name, phone, vehicle details via <code>PUT /api/delivery-partners/profile</code>
Order History	Complete delivery history with status and earnings

6. Admin Portal Journey

6.1 Authentication & Roles

Role	Login Method	Permissions
Master	Static credentials (H2O admin / admin@H2O)	Full access — all modules, financials, delete users, create admins
Admin	Database credentials	Same as Master for operational actions
Sub-Admin	Database credentials	Cannot access financials, delete users, remove suppliers, or create admins

JWT token stored in `localStorage` as `h2o_admin_token` . Auth verified via `GET /api/admin/auth/me` .

6.2 Dashboard

Central tile grid linking to all admin modules. Tiles hidden for sub-admin where restricted (Financials, Admin Users).

6.3 User Management

- List all customers and suppliers with search and filter
- View user details: profile, role, segment, registration date
- Edit profile fields (name, email, phone, etc.)
- Delete user (master/admin only)

6.4 Order Management

- List all orders with status filter (pending, accepted, in progress, delivered, cancelled)
- View order detail: items, customer info, supplier responses, payment method, delivery status per supplier
- Monitor multi-supplier order fulfillment

6.5 Supplier Management

View Pending / Approved supplier tabs

Review uploaded documents (license, GST, identity, bank)

Verify individual documents OR approve entirely

Set commission percentage (default 20%)

Supplier can now accept orders on mobile app

- Pre-create approved suppliers via admin form
- Delete supplier (master/admin only)

6.6 Delivery Partner Management

- List all delivery partners with status and vehicle type filters
- Review and verify documents: identity, license, vehicle registration
- Approve partner for active duty
- Approved partners available for order assignment and subscription routes

6.7 Plans & Subscriptions

Plan Management

- Edit plan metadata: name, slug, max quantity per product, coming soon flag
- CRUD plan products with daily, weekly, and monthly pricing rates
- Plans: Basic (max 5 qty), Family, Active, Premium

Subscription Management (5 Tabs)

Tab	Function
Details	View subscription info: customer, plan, products, frequency, address
Financials	Subscription value, billing history, revenue
Status	Activate, pause (inactive), or cancel subscriptions
History	Status change and delivery history log
Delivery	Assign delivery partner, pickup hub; bulk assign; locality/pin filters; 13-min slot conflict detection

6.8 Wallet Management

Manage wallets across all user segments:

Segment Tab	Actions
Customer	View balance, add/deduct/set with notes
Corporate	View balance, adjust
Organization	View balance, adjust
Institute	View balance, adjust
College	View balance, adjust
Supplier	View balance, adjust
Delivery Partner	View balance, adjust

6.9 Financials (Master/Admin Only)

- **Total revenue** — all completed order value
- **Platform cut** — 20% single-supplier orders, 30% multi-supplier orders
- **Wallet revenue** — funds collected via wallet payments
- **Payouts** — amounts paid to suppliers and delivery partners
- **Net profit** — platform revenue minus payouts
- **Daily breakdown** — revenue and transaction trends by date

6.10 Support Modules

Supplier Support

- Thread list of all supplier conversations
- Read messages and reply to suppliers
- Real-time issue resolution

Delivery Partner Support

- Thread list of delivery partner conversations
- Read messages and reply to partners
- Route and delivery issue handling

6.11 Admin User Management (Master/Admin Only)

- Create new admin or sub-admin accounts
- Assign role: admin (full) or sub-admin (restricted)
- API: `POST /api/admin/admins`

7. Core Business Workflows

7.1 Instant Order Lifecycle

1. Order Placement — Customer selects products, checkout, pays (wallet/COD). Stock validated. Wallet debited → platform wallet credited.

←

2. Supplier Notification — Order created with supplierResponses[] per unique supplier (status: pending).

←

3. Supplier Action — Accept (ETA + assign rider) or Reject. All reject → order cancelled.

←

4. Pickup — Delivery partner marks picked up. Status: picked_up.

←

5. Delivery — Partner marks delivered. Order status: delivered.

←

6. Payout — Platform wallet debited. Supplier gets (100–commission%) of items. Delivery partner gets 10% of total.

7.2 Subscription Lifecycle

1. Creation — Customer selects plan, products, frequency, dates, time window, address.

←

2. Admin Assignment — Admin assigns delivery partner + pickup hub. Bulk assign with slot conflict checks.

←

3. Recurring Delivery — Partner fulfills on schedule via Subscription Orders screen.

←

4. Monthly Billing — Auto-generated bill (due 5th). Customer pays via wallet.

←

5. Management — Admin can pause, cancel, or delete. Customer can cancel via app.

7.3 Payment & Payout Flow

Event	Customer Wallet	Platform Wallet	Supplier Wallet	Delivery Wallet
Customer tops up	+credit	—	—	—
Order placed (wallet)	–debit	+credit	—	—
Order delivered	—	–debit	+credit (net of commission)	+credit (10%)
Bill paid (wallet)	–debit	+credit	—	—
Admin adjustment	±adjust	—	±adjust	±adjust

7.4 Onboarding & Verification Workflow

Step	Actor	Action
1	Supplier/Partner	Registers on mobile with business details and documents
2	System	Creates user + profile with status "pending" and verification code
3	Supplier/Partner	Views verification code; waits on pending screen (polls API)
4	Admin	Reviews documents in admin portal
5	Admin	Verifies individual docs or approves entirely; sets commission %
6	System	Status → "approved"; mobile app auto-redirects to dashboard

7.5 Support Communication Workflow

1. Supplier or delivery partner opens support screen on mobile
2. Sends message via API → stored in support thread
3. Admin sees new thread/message in admin portal support module
4. Admin replies → message delivered to mobile on next poll (5-second interval)
5. Bi-directional conversation until issue resolved

8. Complete Feature Matrix

Feature	Customer	Supplier	Delivery	Admin
Registration / Login	✓	✓	✓	✓

9. API Reference Summary

9.1 Authentication Endpoints

Method	Endpoint	Description
POST	/api/auth/register	Customer registration
POST	/api/auth/register-supplier	Supplier / delivery agent registration
POST	/api/auth/register-delivery	Dedicated delivery partner registration
POST	/api/auth/login	Mobile app login (JWT)
POST	/api/admin/auth/login	Admin portal login
GET	/api/admin/auth/me	Current admin user

9.2 Customer Endpoints

Method	Endpoint	Description
GET/PUT	/api/users/me	Profile read/update
GET	/api/products	Product catalog
POST	/api/orders	Place order
GET	/api/orders	Order history
PATCH	/api/orders/:id/cancel	Cancel order
GET/POST	/api/wallet	Wallet balance / credit / debit
GET/POST	/api/subscriptions	Subscriptions list / create
GET/POST	/api/bills	Bills list / pay
CRUD	/api/addresses	Saved addresses
GET/POST	/api/water-intake	Water intake tracking
POST	/api/reviews	Product reviews
GET	/api/plans	Subscription plans

9.3 Supplier Endpoints

Method	Endpoint	Description
GET	/api/suppliers/me	Supplier profile & onboarding status
POST	/api/supplier/accept-order	Accept incoming order
POST	/api/supplier/reject-order	Reject order
POST	/api/supplier/assign-rider	Assign delivery partner
CRUD	/api/supplier/products	Product catalog management
GET	/api/supplier/financials	Revenue and earnings
GET/POST	/api/supplier-support	Support chat

9.4 Delivery Partner Endpoints

Method	Endpoint	Description
PUT	/api/delivery-partners/profile	Update profile
POST	/api/delivery-partners/mark-picked-up	Mark order picked up
POST	/api/delivery-partners/mark-delivered	Mark order delivered
GET	/api/delivery-partners/subscriptions	Subscription deliveries
GET	/api/delivery-partners/financials	Earnings summary
GET/POST	/api/delivery-support	Support chat

9.5 Admin Endpoints

Method	Endpoint	Description
GET/PUT/DELETE	/api/admin/users	User management
POST	/api/admin/admins	Create admin users
GET	/api/admin/orders	All orders
GET/PATCH/DELETE	/api/admin/suppliers	Supplier management
GET/PATCH	/api/admin/delivery-partners	Partner management
GET/PUT	/api/admin/plans	Plan management
GET/PATCH/DELETE	/api/admin/subscriptions	Subscription management
GET/POST	/api/admin/wallet-management	Wallet adjustments
GET	/api/admin/financials	Platform financials
GET/POST	/api/admin/supplier-support	Supplier support threads
GET/POST	/api/admin/delivery-support	Delivery support threads
GET/POST	/api/admin/pickup-hubs	Pickup hub management

10. Data Models

Model	Key Fields	Purpose
User	userCode, email, password, role, segment, profile	All platform users
Supplier	businessName, documents, onboardingStatus, commissionPercentage	Water vendor profiles
DeliveryPartner	vehicleType, vehicleNumber, documents, onboardingStatus	Delivery rider profiles
Product	name, price, stock, capacity, category, supplierId	Marketplace catalog
Order	orderId, items[], supplierResponses[], status, paymentMethod	Instant orders
Plan	name, slug, maxQuantityPerProduct, comingSoon	Subscription tiers
PlanProduct	planId, name, dailyRate, weeklyRate, monthlyRate	Plan-specific SKUs
Subscription	subscriptionId, plan, frequency, deliveryWindow, partnerId, hubId	Recurring deliveries
SubscriptionBill	subscriptionId, amount, status, dueDate	Monthly billing
Wallet	userId, balance, transactions[]	User/platform wallets
SavedAddress	userId, label, address, pinCode, locality	Customer addresses
PickupHub	name, address, location	Subscription pickup points
ProductReview	userId, productId, orderId, rating, comment	Product ratings
WaterIntake	userId, date, amount, unit	Hydration tracking
SupplierSupportThread	supplierId, messages[]	Supplier-admin chat
DeliveryPartnerSupportThread	partnerId, messages[]	Partner-admin chat

User Code Prefixes

Prefix	Role
Cust_	Customer
Sup_	Supplier
Del_	Delivery Partner
Admin_	Admin
SubAdmin_	Sub-Admin

11. Future & Planned Features

Feature	Status	Notes
Corporate Accounts	UI Built	Dashboard, invoices, bulk orders — login blocked
Restaurant Solutions	Coming Soon	Role card on selection screen
Event Organization	Coming Soon	Large volume planning
Institute / Campus	Coming Soon	Campus monitoring
Forgot Password	UI Only	Screen exists; no backend reset
OTP Login	Mock	Screen exists; mock verification
Google / Apple Sign-In	Placeholder	Buttons on login screen
Card / UPI Payment Gateway	UI Only	Payment method stored; no gateway
Connected Devices	Placeholder	Apple Watch, Smart Bottle, TV Hub UI
Coupon System	UI Only	Coupon field on checkout

12. Appendix

12.1 Mobile App Screens (45 Total)

Category	Screens
Bootstrap	Loading, Role Selection
Auth	Login, Login OTP, Forgot Password, Create Profile
Customer (14)	Dashboard, Profile, Order, Cart, Checkout, Payment, Order Confirmed, Order History, Track Order, Saved Addresses, Plan Subscription, Billing, Water Intake
Supplier (11)	Onboarding, Onboarding Status, Verification Pending, Dashboard, Incoming Orders, Assign Rider, Order History, Products, Financials, Wallet, Support
Delivery (10)	Onboarding, Verification Pending, Dashboard, Incoming Orders, Subscription Orders, Order History, Summary, Financials, Help, Profile
Corporate (5)	Profile, Validation, Dashboard, Order History, Invoices

12.2 Admin Portal Pages (12 Total)

Login, Dashboard, Users, Orders, Suppliers, Plans, Subscriptions, Wallet Management, Financials, Admin Users, Delivery Partners, Supplier Support, Delivery Partner Support

12.3 Commission & Payout Rules

- Default supplier commission: 20% (configurable per supplier by admin)
- Platform cut on financials dashboard: 20% (single-supplier orders), 30% (multi-supplier orders)
- Delivery partner payout: 10% of order total on wallet-paid deliveries
- Payout triggered automatically on order delivery completion

12.4 Environment Configuration

Component	Variable	Default
Mobile	EXPO_PUBLIC_API_URL	Backend API base URL
Admin	VITE_API_URL	http://localhost:5000
Backend	MONGODB_URI	mongodb://127.0.0.1:27017/h2online
Backend	JWT_SECRET	h20-secret
Backend	PORT	5000

Document generated from H2O Online codebase analysis.

Repository: H2Oonline · Mobile (Expo/React Native) · Admin (React/Vite) · Backend (Express/MongoDB)
